Dr. Liban Ismail Abdillahi

Senior Technical Assistance Expert

Digital Transformation | Data Governance | Artificial Intelligence | Results-Based Management (RBM)

Professional Profile

Senior Technical Assistance Expert with over 10 years of experience in digital transformation, data governance, Artificial Intelligence and Results-Based Management (RBM). Proven track record in supporting public institutions, academic systems and development-oriented programmes through the design and implementation of data-driven solutions, performance monitoring frameworks and decision-support systems.

Extensive experience in institutional capacity building, stakeholder coordination and international cooperation, with a strong focus on digital systems strengthening, data analytics and evidence-based policy and management.

Core Expertise

- Digital Transformation and Digital Systems
- Data Governance and Gender-Disaggregated Data Analysis
- Artificial Intelligence and Data Science
- Business Intelligence and Decision-Support Systems
- Results-Based Management (RBM), Monitoring and Evaluation (M&E)
- Capacity Building and Institutional Strengthening

Current Positions

- Associate Professor in Applied Mathematics, University of Djibouti
- Director Laboratory of Analysis, Modelling and Optimization (LAMO)
- Founder and Academic Coordinator, Master's Programme in Artificial Intelligence and Data Modelling (IAMD)

Djibouti | Available for International Assignments

Key Competencies

Digital Transformation	Data Analytics	Institutional Strengthening
Artificial Intelligence	Data Governance	Research Management
Performance Monitoring	Decision Support Systems	Capacity Development

1 Professional Profile

Dr. Liban Ismail Abdillahi is a Senior Expert in Digital Systems, Results-Based Management (RBM), Data Governance and Institutional Performance, with over 10 years of experience supporting public institutions, higher education systems and development-oriented programmes.
He has strong expertise in the design and implementation of RBM frameworks, KPI systems, monitoring and evaluation (M&E) tools, and data-driven decision-support systems, particularly in institutional and public-sector contexts.

Experience contributing to projects implemented under international donor environments, including programmes aligned with EU cooperation principles, institutional accountability, results-based management and performance reporting.

His experience includes advising institutions on digital transformation, information systems strengthening, data governance strategies, interoperability and data quality improvement, aligned with international development and donor-funded project standards.

Dr. Liban has contributed to multi-stakeholder projects involving public institutions, academia and international partners, supporting organisational reform, institutional performance enhancement and evidence-based management.

He has extensive experience in technical assistance, project coordination, stakeholder engagement, capacity building and professional training, with a strong focus on institutional strengthening, digital innovation and sustainable development.

As Associate Professor in Applied Mathematics at the University of Djibouti and Director of the Laboratory of Analysis, Modelling and Optimization (LAMO), he leads multidisciplinary teams, manages research and innovation programmes, and coordinates partnerships with national and international institutions.

2 Key Achievements

The following achievements highlight Dr. Liban Ismail Abdillahi's leadership in digital innovation, institutional performance improvement, research management and international cooperation.

- **Designed and implemented Results-Based Management (RBM) frameworks and KPI systems** to support institutional performance monitoring, strategic planning and evidence-based decision-making.
- **Developed data analytics and business intelligence solutions, including dashboards and reporting tools,** improving data accessibility, transparency and organisational efficiency.
- **Advised institutional stakeholders on digital transformation and data governance strategies,** including data quality management, interoperability and information systems strengthening.
- **Coordinated multi-stakeholder projects involving public institutions and international partners,** ensuring alignment with development objectives, reporting requirements and capacity-building outcomes.
- **Founded and currently directs the Laboratory of Analysis, Modelling and Optimization (LAMO),** a multidisciplinary platform supporting applied research, data science and innovation.
- **Designed and launched Djibouti's first Master's Programme in Artificial Intelligence and Data Modelling (IAMD),** contributing to national capacity building in AI, data science and digital technologies.
- **Established and managed strategic partnerships with academic, governmental and international organisations,** strengthening collaboration in research, innovation and institutional development.
- **Led externally funded projects supported by international organisations,** ensuring technical coordination, implementation, reporting and stakeholder engagement.
- **Delivered training, workshops and capacity-building activities** in data analytics, RBM, digital systems and institutional performance for diverse stakeholders.

3 Alignment with Digital Systems, RBM and Data Governance Expert Requirements

Dr. Liban Ismail Abdillahi's professional background demonstrates strong alignment with the requirements of the Digital Systems, Results-Based Management (RBM) and Data Governance Expert position.

- **Digital systems and organisational digitalisation:** Demonstrated experience supporting the improvement of institutional information systems, digital processes and data-enabled management approaches within academic, public and organisational environments.

- **Results-Based Management and performance monitoring:** Proven experience designing RBM approaches, KPI frameworks, monitoring tools and reporting mechanisms supporting performance measurement and strategic management.
- **Data governance and analytical capabilities:** Strong expertise in data management, quality assessment, analytical workflows and structured information processes supporting reliable decision-making.
- **Business intelligence and reporting solutions:** Experience developing dashboards, analytical reports and decision-support tools using Power BI, Excel, statistical analysis and data visualisation methods.
- **Data systems integration and interoperability:** Experience analysing organisational processes, improving information flows and supporting coherence between operational systems and management needs.
- **Training, advisory support and knowledge transfer:** Extensive experience delivering technical guidance, professional training and knowledge-sharing activities for institutional stakeholders.

4 Relevant Experience for EU Technical Assistance Assignments

- Coordinated internationally funded research and institutional projects involving African and European partners, ensuring technical reporting, stakeholder coordination and delivery of project outputs.
- Developed long-term cooperation with European universities, including Université Clermont Auvergne (France), Université Savoie Mont Blanc (France) and Louis Pasteur University (France), supporting research, doctoral supervision and institutional capacity building.
- Managed multidisciplinary collaborations with universities, research centres, public institutions and development stakeholders across Djibouti and the Horn of Africa (Ethiopia and Somalia).
- Contributed to institutional strengthening through the creation of Djibouti's first Master's programme in Artificial Intelligence and Data Modelling, capacity-building initiatives and research governance.
- Applied Results-Based Management (RBM) principles through KPI development, performance monitoring, analytical reporting and evidence-based decision support in academic and consultancy assignments.
- Prepared technical reports, scientific deliverables and project documentation for externally funded programmes, ensuring effective coordination with institutional partners.
- Extensive experience working within multicultural and international cooperation environments, supporting knowledge transfer, stakeholder engagement and sustainable institutional development.

5 Key Qualifications Relevant to the Assignment

Dr. Liban Ismail Abdillahi brings more than 10 years of professional experience in Digital Transformation, Data Governance, Results-Based Management (RBM), Business Intelligence, Artificial Intelligence and Data Analytics, supporting institutional modernisation and evidence-based decision-making within academic, public-sector and development environments.

His expertise combines the assessment and strengthening of institutional information systems, performance monitoring frameworks, KPI development, analytical dashboards and data governance mechanisms supporting organisational performance, accountability and strategic planning.

His qualifications particularly relevant to this assignment include:

- More than 10 years of professional experience in digital transformation, institutional strengthening and analytical systems development.
- Coordination of 3+ internationally funded research and institutional projects involving African and European partners.

- Design of 5+ KPI frameworks, analytical dashboards and decision-support tools for institutional performance monitoring.
- Experience assessing institutional information systems, operational data flows and reporting processes to identify digital improvement opportunities.
- Strong expertise in Results-Based Management (RBM), data governance, Business Intelligence, interoperability concepts and evidence-based management.
- Experience in analysing gender-disaggregated socio-economic data, developing indicators and analytical dashboards, and supporting evidence-based decision-making through data-driven approaches.
- Establishment of 8+ strategic partnerships with universities, public institutions and international organisations.
- Leadership of multidisciplinary teams and supervision of 5+ doctoral and postgraduate researchers.
- Delivery of 20+ workshops, seminars and capacity-building activities in Artificial Intelligence, Data Science, Digital Transformation and Performance Monitoring.
- Strong stakeholder coordination and technical advisory experience supporting institutional development initiatives.
- In-depth knowledge of Djibouti's institutional ecosystem and regional cooperation context, providing a solid foundation for supporting IGAD institutional strengthening under Pillar 3: Digital Systems, Data Governance and Performance Monitoring.

6 Career Highlights

Professional Experience	10+ years in Digital Transformation, Data Science, AI and Institutional Development
Technical Assistance and Advisory Assignments	3+ assignments supporting institutional performance, digital systems and data governance
International Projects Coordinated	3+ donor-supported projects with academic and institutional partners
Digital Transformation and Data Solutions	5+ dashboards, KPI systems and decision-support tools developed
Performance Monitoring and RBM	3+ KPI frameworks and institutional monitoring systems designed
Strategic Partnerships	8+ collaborations with universities, research centres and institutional stakeholders across Africa and Europe
Research and Innovation Management	USD 60,000+ research funding managed; 6+ peer-reviewed publications
Leadership and Capacity Building	Directed multidisciplinary teams; supervised 5+ doctoral researchers and delivered 20+ scientific and technical training activities

7 Doctoral Supervision and Research Leadership

As Director of the Laboratory of Analysis, Modelling and Optimization (LAMO), Dr. Liban Ismail Abdillahi contributes to the development of advanced research capabilities through the supervision and mentoring of doctoral projects conducted with European and African partner universities.

His doctoral activities cover artificial intelligence, digital systems, mathematical modelling, epidemiology, climate resilience and advanced computational methods. Through these collaborations, he supports international research networks, knowledge exchange and the development of high-level scientific expertise.

Period	Partner Institution	Research Topic	Role
2026–Present	Université Clermont Auvergne (France)	Artificial Intelligence and Robust Neural Networks: reliability, annotation errors, labelling bias and data poisoning attacks.	PhD Co-supervisor (AI, Machine Learning, Statistics, Uncertainty Analysis)
2026–Present	Adama Science and Technology University (Ethiopia)	Spatial epidemiological modelling of malaria transmission in Djibouti.	PhD Co-supervisor (Epidemiological Modelling, Statistics, Analytical Methods)
2026–Present	Adama Science and Technology University (Ethiopia)	One Health modelling of human brucellosis: risk assessment and epidemiological analysis.	PhD Co-supervisor (Mathematical Modelling, Statistics, Research Mentoring)
2025–Present	Université de Toulon (France)	Hydrodynamic modelling, coastal erosion and climate risk assessment.	PhD Co-supervisor (Environmental Modelling, Numerical Simulation)
2024–Present	Université La Rochelle (LMIA, France)	Numerical methods for distributed systems and partial differential equations.	PhD Co-supervisor (Numerical Analysis, Scientific Computing)

Contribution to EU Technical Assistance

- Strengthening research ecosystems and innovation capabilities through international doctoral cooperation.
- Supervising multidisciplinary research teams and supporting advanced scientific training.
- Facilitating knowledge exchange between African and European academic institutions.
- Developing expertise in Artificial Intelligence, Data Science, computational modelling and analytical methodologies.
- Supporting long-term institutional development through doctoral education and international scientific networks.

8 Core Technical Competencies

Dr. Liban Ismail Abdillahi combines expertise in digital transformation, data governance, artificial intelligence and institutional development with experience supporting technical assistance assignments, performance improvement initiatives and multidisciplinary programmes.

Area of Expertise	Key Competencies
Digital Transformation and Information Systems	Assessment and optimisation of digital systems, information flows, business processes and technology-enabled solutions supporting organisational modernisation.
Data Governance, Analytics and Business Intelligence	Design of data management frameworks, data quality approaches, analytical dashboards, KPI systems and decision-support tools using Power BI, Excel, Python, R, MATLAB and SQL.
Results-Based Management (RBM), Monitoring and Evaluation	Development of results frameworks, performance indicators, monitoring mechanisms and reporting tools supporting accountability and evidence-based management.
Artificial Intelligence and Advanced Modelling	Application of AI, machine learning, mathematical modelling, optimisation methods and quantitative approaches for complex decision-making challenges.
Technical Assistance and Institutional Development	Provision of advisory support, institutional assessments, project coordination and implementation assistance for public institutions, universities and development stakeholders.
Leadership, Capacity Building and Knowledge Transfer	Management of multidisciplinary teams, supervision of researchers, design of training programmes and development of institutional capacities through knowledge-sharing initiatives.
Strategic Partnerships and International Cooperation	Coordination of collaborations with universities, research centres, ministries, development partners and private-sector stakeholders across Africa and Europe.

9 Results-Based Management (RBM) and Performance Monitoring

Dr. Liban Ismail Abdillahi has extensive experience supporting organisations in establishing performance measurement systems, monitoring mechanisms and analytical tools that improve accountability, strategic management and operational effectiveness. His expertise covers RBM frameworks, KPI systems, monitoring and evaluation approaches, reporting tools and data-driven decision-support solutions.

RBM Competency	Professional Experience and Expertise
Results-Based Management (RBM)	Design and implementation of RBM approaches linking institutional objectives, expected results, activities and measurable performance indicators.
Performance Indicators and KPI Systems	Development of KPI frameworks, performance monitoring mechanisms and quantitative indicators supporting operational tracking and management decision-making.
Monitoring, Evaluation and Reporting	Design of monitoring approaches, analytical reporting workflows and performance review mechanisms supporting accountability and continuous improvement.
Dashboards and Data-Driven Decision Support	Development of Business Intelligence dashboards, reporting tools and analytical solutions using Power BI, Excel, Python and data analytics methods.
Institutional Performance Improvement	Assessment of organisational processes, identification of improvement opportunities and formulation of evidence-based recommendations to enhance efficiency and service delivery.
Capacity Building and Stakeholder Support	Delivery of training, advisory support and knowledge-transfer activities related to RBM, KPI development, monitoring practices and analytical decision-making.

10 Professional Experience

Senior Consultant – SGTD (Warehouse Optimisation and Decision Support)

Client / Beneficiary	SGTD – Doraleh Container Terminal
Department	Reporting, Performance and Control (RPC)
Country	Djibouti
Period	April 2024 – September 2024
Position	Senior Consultant – Digital Systems, Data Analytics and Decision Support
Project Context	Technical consultancy supporting warehouse inventory optimisation through KPI-based monitoring, quantitative modelling and data-driven decision-support.
Responsibilities	Designed KPI-based inventory frameworks; developed quantitative models for optimal replenishment; analysed operational data; assessed inventory processes; recommended improvements to cost efficiency and stock management.
Key Achievements	Developed an inventory optimisation methodology; established KPI monitoring tools; improved replenishment planning; reduced stock shortage and overstock risks; strengthened operational decision-making.
Competencies	Business Intelligence; KPI Frameworks; Inventory Optimisation; Data Analytics; Decision Support; Digital Transformation.
EU Relevance	Experience in KPI development, decision-support, operational optimisation and evidence-based performance management.

Senior Consultant – SGTD (Predictive Modelling for Terminal Operations)

Client / Beneficiary	SGTD – Doraleh Container Terminal
Department	Reporting, Performance and Control (RPC)
Country	Djibouti
Period	October 2024 – March 2025
Position	Senior Consultant – Digital Systems, Predictive Analytics and Performance Monitoring
Project Context	Technical consultancy supporting terminal planning through predictive modelling, data quality assessment and decision-support for congestion management.
Responsibilities	Developed predictive models for terminal occupancy forecasting; analysed historical operational data; designed scenario-based forecasts; identified data quality issues; provided recommendations to improve planning and reporting.
Key Achievements	Developed a predictive framework for terminal capacity planning; improved forecasting reliability; identified key data governance gaps; strengthened operational planning and congestion management.
Competencies	Predictive Analytics; Mathematical Modelling; Data Governance; Business Intelligence; Performance Monitoring; Decision Support.
EU Relevance	Experience in predictive analytics, data governance, performance monitoring and evidence-based decision support aligned with RBM.

Director – Laboratory of Analysis, Modelling and Optimization (LAMO)

Client / Employer	University of Djibouti
Country	Djibouti
Period	2024 – Present
Position	Director – Laboratory of Analysis, Modelling and Optimization (LAMO)
Responsibilities	Provide strategic leadership for a multidisciplinary research laboratory specialised in Artificial Intelligence, Data Science, mathematical modelling and digital innovation; manage research teams and doctoral activities; develop institutional partnerships; establish governance mechanisms and support knowledge transfer and innovation initiatives.
Key Achievements	Established LAMO as a platform for AI, modelling and data-driven research; developed collaborations with national and international academic partners; strengthened research coordination, scientific capacity building and institutional cooperation. Coordinate institutional partnerships involving universities, government institutions and international organisations to strengthen research, innovation and digital transformation capacity.
Competencies	Research Governance; Institutional Management; Artificial Intelligence; Data Science; Strategic Partnerships; Scientific Leadership; Capacity Building.
EU Relevance	Strong experience in institutional development, technical coordination, international partnerships and implementation of innovation-oriented capacity-building programmes.

Founder and Academic Coordinator – Master in Artificial Intelligence and Data Modelling (IAMD)

Client / Employer	University of Djibouti
Country	Djibouti
Period	2025 – Present
Position	Founder and Academic Coordinator
Responsibilities	Led the institutional design and implementation of Djibouti's first Master's programme in Artificial Intelligence and Data Modelling, contributing to national digital capacity development and public-sector digital skills. Supervised applied Master's projects with public institutions involving data analysis, gender-disaggregated socio-economic information, indicator development and data visualisation for evidence-based decision-making.
Key Achievements	Launched a postgraduate programme integrating Artificial Intelligence, Data Science, Business Intelligence and mathematical modelling;trained the first cohorts of advanced digital specialists through 20+ specialised modules covering AI, Data Science, Business Intelligence and digital technologies. Supervised student-led analytical projects conducted in collaboration with institutional stakeholders, including analysis of gender-disaggregated socio-economic data, development of monitoring indicators and data visualisation approaches supporting inclusive evidence-based decision-making.
Competencies	Artificial Intelligence; Data Science; Curriculum Development; Higher Education Management; Capacity Building; International Cooperation.
EU Relevance	Contribution to digital skills development, human capital strengthening and sustainable institutional capacity building.

Project Coordinator – MoMathEpiDji Project

Client / Beneficiary	African Centre of Excellence in Logistics and Transport (ACE-CEALT)
Employer	University of Djibouti / ACE-CEALT
Country	Djibouti
Funding Source	ACE-CEALT
Project Budget	Approx. USD 30,000
Period	2022 – 2024
Position	Project Coordinator and Mathematical Modelling Expert
Responsibilities	Coordinated the implementation of an internationally funded research project; managed collaboration between Djiboutian and European research partners; supervised mathematical modelling activities; prepared technical reports and project deliverables; supported the dissemination of research results for public-health decision support.
Key Achievements	Successfully managed a funded research programme involving international partners; developed mathematical modelling approaches for epidemic analysis; strengthened scientific cooperation between Djibouti and European research institutions.
Competencies	Project Management; Donor-Funded Programmes; Mathematical Modelling; Research Partnerships; Technical Reporting; Scientific Coordination.
EU Relevance	Demonstrated experience in coordinating international projects, managing technical outputs and supporting evidence-based decision-making within research and institutional cooperation frameworks.

Data Analysis and Modelling Expert – World Bank / INSTAD Project

Client / Beneficiary	National Institute of Statistics of Djibouti (INSTAD)
Employer	ACE-CEALT
Country	Djibouti
Funding Source	World Bank
Project Budget	World Bank funded project
Period	September 2023
Position	Data Analysis and Modelling Expert
Main Responsibilities	• Supported quantitative analysis, data processing and modelling activities within a development-oriented statistical project. • Applied analytical methodologies to improve data interpretation and management information processes. • Provided technical expertise in statistical analysis, modelling and digital analytical tools. • Contributed to the preparation of analytical outputs supporting institutional planning and decision processes.
Competencies Demonstrated	Statistical Analysis; Data Science; Quantitative Modelling; Analytical Reporting; Development Data Support.
Relevance to EU Assignment	Relevant experience supporting data-driven institutional activities, statistical analysis and analytical approaches within development projects.

Mathematical Modelling Expert – COVID-19 Response Project

Client / Beneficiary	Ministry of Health / National COVID-19 Response
Employer	ACE-CEALT
Country	Djibouti
Funding Source	ACE-CEALT
Period	April 2020 – August 2020
Position	Mathematical Modelling Expert
Responsibilities	Developed epidemiological models and quantitative approaches to analyse disease dynamics, evaluate intervention scenarios and provide analytical support for public-health decision-making.
Competencies	Mathematical Modelling; Epidemiological Analysis; Quantitative Methods; Decision Support; Policy Analytics.
EU Relevance	Experience applying advanced modelling approaches to support evidence-based public-sector decisions and health policy planning.

Associate Professor in Applied Mathematics

Client / Employer	University of Djibouti
Country	Djibouti
Period	2016 – Present
Position	Associate Professor in Applied Mathematics
Responsibilities	Conduct research in mathematical modelling, optimisation, Artificial Intelligence and data analysis; supervise undergraduate and doctoral research; develop academic partnerships; contribute to curriculum development and scientific mentoring.
Key Achievements	Published 6+ peer-reviewed articles; supervised 5+ doctoral and postgraduate researchers; developed international collaborations and contributed to advanced training programmes in AI and Data Science.
Competencies	Research Leadership; Higher Education Management; Scientific Cooperation; Knowledge Transfer; Advanced Analytics.
EU Relevance	Strong experience in research management, capacity building, institutional development and international academic cooperation.

11 Professional Leadership, Institutional Governance and Scientific Engagement

Dr. Liban Ismail Abdillahi has demonstrated sustained leadership in research governance, higher education development, scientific cooperation and innovation management through senior institutional responsibilities, academic leadership roles and international scientific engagement.

Director and Founder
Laboratory of Analysis, Modelling and Optimization (LAMO), University of Djibouti
Period: 2024 – Present
Main Responsibilities and Achievements:

- Provide strategic direction and institutional management for LAMO, a multidisciplinary laboratory focusing on Artificial Intelligence, Data Science, mathematical modelling and computational methods.
- Lead research teams, doctoral activities and collaborative initiatives involving national and international academic partners.
- Establish research programmes, partnership frameworks and operational mechanisms supporting scientific development.

- Promote innovation, knowledge exchange and analytical approaches supporting institutional performance improvement.

Associate Professor in Applied Mathematics
University of Djibouti
Period: 2023 – Present
Main Responsibilities:

- Conduct research in mathematical modelling, optimisation, data science and computational methods.
- Supervise undergraduate, postgraduate and doctoral research activities.
- Contribute to academic governance, curriculum development and advanced scientific training.
- Develop research networks and collaborative activities with national and international institutions.

Founder and Academic Coordinator
Master Programme in Artificial Intelligence and Data Modelling (IAMD), University of Djibouti
Period: 2025 – Present
Main Responsibilities and Achievements:

- Designed and coordinated Djibouti's first Master's programme specialised in Artificial Intelligence and Data Modelling.
- Developed competency-based curricula integrating Artificial Intelligence, Data Science, Business Intelligence and analytical methods.
- Coordinated academic partnerships with European universities and international scientific networks.
- Supported the development of advanced digital skills and national expertise in emerging technologies.

International Scientific Reviewer
Peer-Reviewed International Journals
Period: 2025 – Present
Main Contributions:

- Review scientific manuscripts for international peer-reviewed journals, including Springer Nature publications.
- Evaluate research methodologies in mathematical modelling, artificial intelligence, optimisation, uncertainty analysis and computational approaches.
- Contribute to international scientific evaluation and quality assurance processes.

Doctoral Co-supervisor and International Research Mentor
International Academic Collaborations:

- Université Clermont Auvergne (France).
- Université de Toulon (France).
- Université La Rochelle (France).
- Adama Science and Technology University (Ethiopia).

Main Contributions:

- Supervise doctoral research projects in artificial intelligence, mathematical modelling, epidemiology and numerical methods.
- Provide scientific mentoring and methodological guidance to early career researchers.
- Strengthen cross-border research networks and knowledge exchange between African and European institutions.

12 Selected Technical Assistance and Institutional Development Experience

Dr. Liban Ismail Abdillahi has delivered technical assistance and institutional development support to public institutions, higher education organisations, development-oriented programmes and private sector stakeholders. His expertise combines Results-Based Management (RBM), data governance, performance monitoring, Business Intelligence, institutional reform and analytical decision-support approaches within multidisciplinary and international environments.

Project Sheet 1 – Digital Systems, Data Governance and Decision Support (SGTD)

Project Title	Warehouse Optimisation and Predictive Analytics for Operational Performance
Client / Beneficiary	SGTD – Doraleh Container Terminal
Employer	SGTD
Country	Djibouti
Funding Source	Private Sector
Period	April 2024 – March 2025
Position	Senior Consultant – Digital Systems, Data Analytics and Decision Support
Role	Delivered two complementary consultancy assignments supporting warehouse optimisation and terminal planning through data analytics, predictive modelling, KPI development and digital decision-support tools.
Key Responsibilities	• Designed KPI-based inventory management and warehouse optimisation frameworks. • Developed quantitative and predictive models for inventory optimisation and terminal occupancy forecasting. • Analysed operational datasets, assessed data quality and identified reporting gaps. • Developed analytical dashboards and decision-support tools for operational monitoring. • Provided recommendations to improve planning, operational efficiency, data governance and reporting processes.
Key Results	• Delivered two consultancy projects supporting warehouse management and terminal operations. • Improved inventory planning, operational forecasting and congestion risk management. • Strengthened KPI monitoring, Business Intelligence and data governance practices. • Enhanced evidence-based decision-making for operational managers.
Relevant ToR Competencies	Digital Transformation; Data Governance; Predictive Analytics; Business Intelligence; KPI Development; Performance Monitoring; Decision Support; Results-Based Management (RBM).

Project Sheet 2 – Institutional Development and Higher Education Reform

Project Title	Design and Implementation of the Master's Programme in Artificial Intelligence and Data Modelling (IAMD)
Client / Beneficiary	University of Djibouti
Employer	University of Djibouti
Country	Djibouti
Period	2025–Present
International Partners	University Clermont Auvergne (France); University Savoie Mont Blanc (France); University Louis Pasteur (France); additional academic partners.
Position	Founder and Academic Coordinator
Role	Led the design, institutional implementation and academic coordination of a postgraduate programme dedicated to Artificial Intelligence, Data Science and digital innovation, supporting national capacity development.
Key Responsibilities	• Designed a competency-based Master's programme structured around **2 specialised tracks**: Mathematical Modelling and Optimisation; Data Science and Decision Intelligence. • Established academic cooperation frameworks with **3+ international universities** and coordinated knowledge exchange activities. • Developed governance mechanisms, quality assurance approaches and monitoring procedures for programme implementation. • Designed **10+ specialised modules** covering Artificial Intelligence, Data Science, MLOps, Data Visualisation, Web Development, Modelling and Digital Ethics. • Coordinated academic stakeholders and contributed to advanced skills development in emerging technologies.
Key Results	• Created the first Master's programme in Djibouti specialised in **Artificial Intelligence and Data Modelling**. • Established academic partnerships involving **3+ international universities** from Europe and Türkiye. • Developed a complete academic framework including **2 specialisations** and **10+ specialised courses** aligned with digital transformation needs. • Strengthened institutional capacity in Artificial Intelligence, Data Analytics and digital innovation through international knowledge transfer. • Supported the development of national human capital for digital transformation and evidence-based decision-making.
Relevant ToR Competencies	Institutional Development; Higher Education Reform; Human Capital Development; Knowledge Transfer; International Partnerships; Digital Skills Development; Capacity Building.

Project Sheet 3 – Research Leadership, Institutional Governance and Capacity Building

Project Title	Strategic Leadership and Institutional Development of the Laboratory of Analysis, Modelling and Optimization (LAMO)
Client / Beneficiary	University of Djibouti – Center for Research in Mathematics and Digital Sciences (CRMN)
Employer	University of Djibouti
Country	Djibouti
Period	2024–Present
Position	Director – Laboratory of Analysis, Modelling and Optimization (LAMO)
Role	Provided strategic leadership and institutional management for a multidisciplinary research laboratory specialised in Artificial Intelligence, Data Science, mathematical modelling and digital innovation; coordinated research activities, partnerships and capacity building initiatives.
Key Responsibilities	• Provided strategic direction, governance and operational management for a multidisciplinary research laboratory involving researchers, doctoral candidates and international academic partners. • Managed and coordinated a research team composed of **10+ researchers and doctoral students** working on Artificial Intelligence, mathematical modelling, optimisation and data analytics. • Developed institutional partnerships with **8+ national and international organisations**, including universities, research centres and public institutions. • Established research coordination mechanisms, project monitoring approaches and internal governance procedures to improve scientific performance. • Supervised doctoral research activities and supported knowledge transfer through seminars, workshops and scientific dissemination initiatives. • Led the development of collaborative research projects supported by international organisations and funding institutions.
Key Results	• Strengthened institutional research capacity through the establishment of a structured governance framework and coordinated research activities. • Developed a sustainable collaboration network involving **8+ academic and institutional partners** across Africa and Europe. • Coordinated multidisciplinary research activities leading to scientific outputs, capacity-building initiatives and international visibility. • Supported the supervision and development of **5+ doctoral researchers** in advanced modelling, Artificial Intelligence and data science fields. • Increased institutional capacity in research management, innovation, digital transformation and evidence-based approaches.
Relevant ToR Competencies	Institutional Leadership; Team Management; Research Governance; Strategic Planning; Stakeholder Coordination; Capacity Building; International Partnerships; Knowledge Transfer; Innovation Management.

13 Regional Context and Stakeholder Experience

Dr. Liban Ismail Abdillahi has developed extensive experience within the institutional, academic and technological environment of the Horn of Africa. His professional activities combine regional understanding, institutional cooperation and expertise in data-driven approaches, capacity development and innovation management.

Regional Integration and IGAD Context

- Strong understanding of the institutional priorities of the Intergovernmental Authority on Development (IGAD) region, including digital transformation, data governance, skills development and regional knowledge exchange.
- Experience collaborating with institutions from Djibouti, Ethiopia and Somalia, contributing to regional capacity building and cooperation within the Horn of Africa.
- Ability to support regional programmes requiring coordination between national institutions, universities and development partners.

Regional Experience and Institutional Understanding

- Strong understanding of institutional development priorities, digitalisation challenges and skills development needs in the Horn of Africa.
- Extensive collaboration experience with universities, ministries, research organisations and development stakeholders in Djibouti, Ethiopia and Somalia.
- Experience supporting organisations in improving data utilisation, performance monitoring and analytical management practices.
- Knowledge of regional higher education systems, research networks and innovation ecosystems.

Stakeholder Engagement and Partnership Management

- Coordinated cooperation between African institutions, European universities and international research partners.
- Managed relationships with academic institutions, public organisations, development actors and private-sector stakeholders.
- Facilitated technical exchanges, knowledge transfer and multicultural collaboration.
- Supported strategic partnerships promoting innovation, research development and institutional improvement.

Regional Communication and Languages

- Professional experience working in multicultural environments involving French, English, Somali and Arabic-speaking stakeholders.
- Ability to facilitate communication between local institutions, regional partners and international organisations.
- Strong understanding of the socio-economic and institutional context of the Horn of Africa.

14 International Projects, Donors and Strategic Partnerships

Dr. Liban Ismail Abdillahi has managed and contributed to international projects involving European and African academic institutions, donor organisations and national stakeholders.

His experience includes externally funded project coordination, international consortium management, scientific cooperation, research implementation and knowledge exchange within multidisciplinary environments.

AUF-Funded Project – Mathematical Modelling of Tuberculosis-HIV Co-infection in Djibouti

Donor / Funding Institution: Agence Universitaire de la Francophonie (AUF)
Country: Djibouti
Period: 2025 – Present
Project Role: Scientific Coordinator / Project Lead
Project Budget: Approx. USD 29,500
Project Objective:
Development of quantitative modelling approaches to analyse Tuberculosis-HIV co-infection dynamics and generate evidence supporting public-health planning and research-based decision processes.

Main Responsibilities:

- Coordinated scientific planning, implementation activities and research outputs.
- Managed collaboration between multidisciplinary researchers and institutional partners.
- Developed mathematical and statistical models integrating epidemiological data and uncertainty analysis.
- Supervised analytical activities and supported research dissemination.
- Contributed to skills development in modelling, statistics and computational methods.

Key Results:

- Established a research framework combining modelling approaches and advanced quantitative analysis.
- Strengthened institutional expertise in infectious disease modelling.
- Increased international visibility of Djiboutian research through scientific outputs.

ACE-CEALT Funded Project – MoMathEpiDji: Mathematical Modelling of Infectious Diseases

Donor / Funding Institution: African Centre of Excellence in Logistics and Transport (ACE-CEALT)
Project Budget: Approx. USD 30,000
Country: Djibouti
Period: 2022 – 2024
Project Role: Project Coordinator and Mathematical Modelling Expert
International Partners:

- Laboratoire de Mathématiques Blaise Pascal, Université Clermont Auvergne (France).
- Laboratoire de Mathématiques de Besançon (France).

Project Objective:
Development of mathematical and computational frameworks for infectious disease analysis using epidemiological data and advanced statistical methods.

Main Responsibilities:

- Coordinated project activities, scientific planning and partner communication.
- Managed collaboration between African and European research teams.
- Developed epidemiological models and computational analysis frameworks.
- Applied sensitivity analysis, uncertainty quantification and statistical modelling techniques.
- Prepared technical outputs, scientific publications and dissemination activities.

Key Results:

- Successfully implemented an internationally funded collaborative research programme.
- Established sustainable cooperation between Djiboutian and French research institutions.
- Produced analytical tools supporting evidence generation and decision processes.

International Academic Cooperation and Research Networks

Institution: University of Djibouti – Laboratory of Analysis, Modelling and Optimization (LAMO)
Role: Founder and Director
International Partners:

- Université Clermont Auvergne (France).
- Université de Toulon (France).
- Université La Rochelle – LMIA (France).
- Université Marie et Louis Pasteur (France).
- Adama Science and Technology University (Ethiopia).
- University of Mogadishu (Somalia).

Main Contributions:

- Developed and managed strategic partnerships involving more than 8 academic and research institutions.
- Coordinated joint research activities, doctoral supervision and scientific exchanges.
- Supported internationalisation of research activities at the University of Djibouti.
- Facilitated knowledge exchange between African and European academic networks.

Doctoral Training and International Research Capacity Development

Role: PhD Co-supervisor and Research Mentor
Collaborating Institutions:

- Université Clermont Auvergne (France).
- Université de Toulon (France).
- Université La Rochelle (France).
- Adama Science and Technology University (Ethiopia).

Key Contributions:

- Supervised doctoral projects in Artificial Intelligence, epidemiological modelling, environmental modelling and numerical analysis.
- Supported early-career researchers through scientific mentoring and methodological guidance.
- Strengthened links between African universities and European research networks.

Collaboration with National Institutions and Development Stakeholders

Country: Djibouti
Institutional Partners:

- University of Djibouti.
- Ministry of Education and Professional Training (MENFOP).
- Ministry of Higher Education and Research (MENSUR).
- National Institute of Statistics of Djibouti (INSTAD).

- African Centre of Excellence in Logistics and Transport (ACE-CEALT).
- SGTD – Doraleh Container Terminal.

Main Contributions:

- Delivered analytical expertise, modelling approaches and technical support to institutional stakeholders.
- Supported improved use of data, monitoring mechanisms and evidence-based planning.
- Facilitated cooperation between public institutions, universities and development-oriented organisations.
- Contributed to innovation ecosystems supporting institutional modernisation.

15 International Cooperation, Donor-Funded Projects and European Academic Partnerships

Dr. Liban Ismail Abdillahi has developed extensive experience in international cooperation through donor-supported research projects and strategic partnerships with European academic institutions. His activities include project coordination, technical reporting, research management, capacity building and knowledge transfer within multicultural and multidisciplinary environments.

As Scientific Coordinator of an Agence Universitaire de la Francophonie (AUF)-funded project on mathematical modelling of Tuberculosis-HIV co-infection in Djibouti (2025–Present, approximately USD 29,500), he coordinates research activities, manages collaboration between institutions, supervises technical outputs and contributes to evidence-based approaches supporting public health decision-making.

Through the Laboratory of Analysis, Modelling and Optimization (LAMO) and the University of Djibouti, he has established sustainable academic partnerships with European universities, including Université Clermont Auvergne, Université Savoie Mont Blanc, Université de Toulon and Université La Rochelle. These collaborations support joint research activities, doctoral supervision, curriculum development, digital skills development and institutional capacity building.

His experience in European-African academic cooperation has strengthened his understanding of international project implementation requirements, stakeholder coordination, results-oriented management, quality assurance processes and knowledge transfer mechanisms aligned with international development cooperation practices.

Key contributions include:

- Coordination of internationally supported projects involving African and European partners.
- Familiarity with international cooperation frameworks, donor reporting requirements, results-based management approaches, monitoring indicators and quality assurance mechanisms applied in externally funded projects.
- Management of technical deliverables, research outputs and institutional cooperation activities.
- Development of capacity-building initiatives through doctoral training, Master's programme development and professional workshops.
- Facilitation of knowledge exchange between European and African institutions in Artificial Intelligence, Data Science, modelling and digital transformation.

16 Education and Academic Qualifications

Dr. Liban Ismail Abdillahi holds advanced academic qualifications in Applied Mathematics, Mathematical Modelling and Data Analytics. His academic background combines mathematical sciences, computational methods and data-driven approaches, providing a strong foundation for expertise in Artificial Intelligence, digital transformation, quantitative analysis and evidence-based decision support.

Doctoral Qualification

PhD in Applied Mathematics
Sensitivity Analysis and Mathematical Modelling of Complex Systems
Institution: Université Clermont Auvergne (UCA), France
Period: 2019–2023
Research Focus
Advanced mathematical modelling of dynamic and uncertain systems through global sensitivity analysis, uncertainty quantification and computational simulation approaches.
Key Competencies Developed

- Mathematical modelling and simulation of complex systems.
- Statistical inference, uncertainty quantification and sensitivity analysis.
- Numerical methods and scientific computing.
- Predictive modelling and data-driven analysis.
- Applications to epidemiology, climate systems and quantitative risk analysis.

Graduate Studies

Master Degree in Applied Mathematics
Université Clermont Auvergne (UCA), France
Period: 2015–2016
Specialisation

- Mathematical modelling and numerical simulation.
- Probability, statistics and stochastic processes.
- Optimisation techniques and computational mathematics.
- Quantitative methods for decision-support applications.

Master Degree in Applied Mathematics
Université Joseph Fourier (now Université Grenoble Alpes), France
Period: 2014–2015
Specialisation

- Mathematical analysis of complex systems.
- Applied modelling methodologies.
- Numerical analysis and scientific computing.

Undergraduate Qualification

Bachelor Degree in Fundamental Mathematics
University of Djibouti, Djibouti
Period: 2013–2014
Academic Foundation
Training in mathematical analysis, algebra, probability, statistics and fundamental concepts supporting advanced applied mathematical methods.

Academic Profile Highlights

- Advanced expertise in mathematical modelling, data analytics and computational methods for complex systems.
- Strong background in uncertainty quantification, predictive modelling and quantitative decision-support approaches.

- Ability to transform advanced scientific methodologies into practical solutions for institutional performance improvement and development challenges.
- Academic foundation directly supporting assignments related to Artificial Intelligence, digital transformation, data governance, innovation management and evidence-based policy analysis.

17 Selected Digital Transformation, Data Governance and Analytical Expertise

Dr. Liban Ismail Abdillahi has applied digital transformation approaches, data governance methodologies and advanced analytical techniques to support institutional performance improvement, operational efficiency and evidence-based decision-making. His expertise combines Digital Systems Assessment, Data Analytics, Business Intelligence, Artificial Intelligence, Results-Based Management (RBM) and quantitative modelling. Through assignments conducted with academic institutions, public organisations and private-sector stakeholders, he supports organisations in improving data utilisation, strengthening monitoring mechanisms and developing sustainable analytical capabilities.

1. Digital Systems Assessment, Data Governance and Performance Monitoring

SGTD – Doraleh Container Terminal, Djibouti

Role: Senior Consultant – Digital Systems, Data Analytics and Decision Support

Key Contributions:

- Led two consultancy assignments supporting warehouse optimisation and terminal operations through data analytics, KPI development and predictive modelling.
- Designed KPI-based inventory management frameworks and quantitative decision-support models to improve warehouse performance and supply chain efficiency.
- Developed predictive models for short- and medium-term container terminal occupancy forecasting using historical operational data and scenario-based analysis.
- Assessed data quality, reporting processes and information flows, providing recommendations to strengthen data governance, planning and operational decision-making.
- Developed analytical tools and Business Intelligence solutions to improve performance monitoring and management reporting.

Technical Value Added:

Strengthened operational planning, inventory management and performance monitoring through predictive analytics, KPI frameworks, Business Intelligence and evidence-based decision-support.

2. Digital Innovation, Research Governance and Institutional Development

Laboratory of Analysis, Modelling and Optimization (LAMO)
University of Djibouti

Role: Director

Key Contributions:

- Established a multidisciplinary innovation platform integrating Artificial Intelligence, Data Science, mathematical modelling and computational approaches.
- Developed analytical frameworks supporting research governance, institutional planning and innovation management.
- Coordinated multidisciplinary teams and international research networks involving African and European institutions.
- Promoted knowledge transfer, digital innovation and capacity development initiatives.

Technical Value Added:

Supported institutional strengthening through the development of research, innovation and data-driven decision-making capabilities.

3. Artificial Intelligence, Data Science and Digital Skills Development

Master Programme in Artificial Intelligence and Data Modelling (IAMD)
University of Djibouti

Role: Founder and Academic Coordinator
Key Contributions:

- Designed and implemented Djibouti's first Master's programme specialised in Artificial Intelligence and Data Modelling.
- Integrated Artificial Intelligence, Data Science, Business Intelligence, data management and analytical methodologies into higher education curricula.
- Developed competency-based training approaches aligned with digital transformation and emerging technology needs.
- Supported national capacity building in advanced digital skills and data-driven innovation.

Technical Value Added:
Contributed to sustainable digital transformation through human capital development, professional training and institutional knowledge transfer.

4. Statistical Analytics, Data Processing and Evidence Generation

INSTAD / World Bank Supported Activities

Role: Data Analysis and Modelling Expert
Key Contributions:

- Applied statistical analysis, quantitative modelling and data processing methodologies to support institutional assessments.
- Developed analytical approaches supporting monitoring, planning and evidence generation.
- Contributed to improved interpretation and utilisation of institutional data for decision-support purposes.

Technical Value Added:
Supported evidence-based management through rigorous quantitative analysis and improved analytical use of institutional information.

5. Gender-Sensitive Data Analysis and Monitoring Approaches

- Supported student-led applied projects in collaboration with social sector stakeholders, focusing on the collection, analysis and interpretation of gender-disaggregated data.
- Contributed to the development of monitoring approaches integrating gender-sensitive indicators to support evidence-based social policy analysis.
- Promoted the use of inclusive data practices within capacity-building and analytical activities.

6. Advanced Modelling, Artificial Intelligence and Policy Decision Support

ACE-CEALT / Ministry of Health Related Projects

Role: Mathematical Modelling and Data Analytics Expert
Key Contributions:

- Developed mathematical models and simulation frameworks supporting epidemiological analysis and policy-oriented decision-making.
- Applied uncertainty quantification, sensitivity analysis and computational methods to analyse complex systems.

- Generated analytical insights supporting public-health planning, risk assessment and intervention strategies.

Technical Value Added:
Provided advanced analytical capabilities enabling evidence-based planning and improved understanding of complex operational and policy challenges.

Overall Technical Value Proposition

Dr. Liban Ismail Abdillahi provides a unique combination of digital, analytical and institutional expertise, enabling organisations to bridge technology, data and strategic management requirements.

- Ability to transform complex datasets into actionable information supporting operational and strategic decisions.
- Strong expertise in digital systems assessment, data governance, Business Intelligence and performance monitoring.
- Proven capacity to integrate Artificial Intelligence and advanced analytics into institutional improvement processes.
- Experience combining scientific excellence with practical technical assistance, capacity building and stakeholder coordination.

18 Research Outputs, Knowledge Dissemination and Scientific Expertise

Dr. Liban Ismail Abdillahi has developed an international research profile combining mathematical modelling, Artificial Intelligence, Data Science and quantitative decision-support approaches. His research contributes to the development of analytical methodologies for complex systems, with applications in public health, environmental risk assessment and evidence-based decision-making.

Selected Research Outputs

- **Epidemiological Modelling and Public Health Decision Support**

  Modeling and Investigating Malaria Plasmodium falciparum and Plasmodium vivax Infections: Application to Djibouti Data.

  Souleiman Y., Ismail L., Eftimie R.

  Infectious Disease Modelling, Vol.9(4), pp.1095–1116, 2024.

  Contribution: Development of mathematical models integrating epidemiological data analysis to support disease surveillance, scenario assessment and evidence-based intervention planning.

- **Optimisation and Cost-Effectiveness Analysis for Health Policies**

  Strategies for optimal control and cost-effectiveness analysis of Plasmodium falciparum and Plasmodium vivax malaria in Djibouti.

  Souleiman Y., Ismail L., Obsu L.L.

  Scientific African, Vol.31, e03262, 2026.

  Contribution: Application of optimisation techniques and quantitative analysis to support intervention planning and resource allocation.

- **Uncertainty Quantification and Risk Assessment of Complex Systems**

  Global Sensitivity Analysis of Climate Systems: A Mathematical Approach.

  Ismail L., Djellout H., Chauvière C.

  Iranian Journal of Science, Vol.47(1), pp.211–227, 2023.

  Contribution: Development of uncertainty analysis approaches for predictive modelling, risk assessment and complex system evaluation.

Doctoral Expertise and Analytical Methodologies

PhD in Applied Mathematics

Sensitivity Analysis Applied to Some Models from Climate, Epidemiology and Finance
Université Clermont Auvergne, France, 2023.

Research expertise includes mathematical modelling, data-driven analysis, uncertainty quantification, numerical simulation and global sensitivity analysis applied to complex decision environments.

Analytical Contribution and Knowledge Transfer

Through his role as Director of the Laboratory of Analysis, Modelling and Optimization (LAMO), Dr. Liban Ismail Abdillahi contributes to research capacity development, interdisciplinary collaboration and knowledge transfer between academic institutions and public stakeholders.

- Development of quantitative approaches supporting evidence generation and institutional decision-making.
- Integration of Artificial Intelligence, Data Science and modelling techniques into applied research and innovation initiatives.
- Supervision, mentoring and capacity building activities in advanced analytical methods.

19 Digital Tools and Technical Skills

Dr. Liban Ismail Abdillahi combines expertise in digital transformation, data governance, business intelligence, artificial intelligence and performance management. His technical skills support the assessment, digitalisation and improvement of institutional processes, the development of data-driven decision systems and the implementation of evidence-based management approaches.

Digital Systems, Data Management and Information Governance

- Assessment and improvement of institutional information systems, digital workflows and data management processes.
- Support to data governance initiatives, including data quality assessment, information structuring, data flows optimisation and responsible data management.
- Analysis of organisational processes and information requirements to support digital transformation initiatives.
- Development of decision-support approaches improving reporting, data accessibility and management visibility.

Business Intelligence, Data Analytics and Performance Monitoring

- **Power BI:** Development of dashboards, Key Performance Indicators (KPIs), management reports and performance monitoring tools.
- **Advanced Excel:** Data processing, analytical reporting, automated calculations and decision-support applications.
- Development of analytical frameworks supporting Results-Based Management (RBM), Monitoring and Evaluation (M&E) and institutional performance assessment.
- Data visualisation and reporting solutions adapted to technical, managerial and institutional stakeholders.

Programming, Data Science and Artificial Intelligence

- **Python:** Data analysis, automation, machine learning applications and scientific computing.
- **R:** Statistical analysis, data modelling and quantitative reporting.

- **SQL:** Database management, structured data processing and analytical data extraction.
- Application of Artificial Intelligence and Machine Learning methods for predictive analytics and intelligent decision-support systems.

Digital Transformation Applications

- Digitalisation of organisational processes and improvement of information management practices.
- Development of KPI frameworks, monitoring mechanisms and reporting systems aligned with RBM principles.
- Integration of digital tools, analytics and Artificial Intelligence approaches into institutional management processes.
- Capacity building, training and knowledge transfer on digital tools, data analytics and evidence-based management.

Key Application Areas

- Digital transformation of public institutions and organisations.
- Data governance, information systems strengthening and performance monitoring.
- Business Intelligence, dashboards and evidence-based reporting.
- Artificial Intelligence, Data Science and advanced analytics.
- Higher education digital innovation and capacity development.
- Decision-support systems for institutional and development programmes.

21 International Partnerships and Institutional Cooperation

Dr. Liban Ismail Abdillahi has established and coordinated strategic partnerships between European and African universities, research centres and public institutions to support digital transformation, institutional capacity building, research development and knowledge transfer.

- Coordinated international academic and technical cooperation with leading European institutions, including Université Clermont Auvergne, Université Savoie Mont Blanc, Université de Toulon and Université La Rochelle, supporting joint research, curriculum development and scientific capacity building.
- Developed regional partnerships with universities in Djibouti, Ethiopia and Somalia to strengthen higher education systems, research collaboration and digital innovation across the Horn of Africa.
- Contributed to the design and implementation of collaborative projects involving Artificial Intelligence, Data Science, mathematical modelling and digital transformation.
- Supported institutional capacity development through curriculum modernisation, researcher training, doctoral supervision and knowledge transfer initiatives.
- Facilitated international cooperation between universities, government institutions and development partners to promote evidence-based decision-making and sustainable institutional development.

22 Institutional Networks, Stakeholder Coordination and Strategic Partnerships

Dr. Liban Ismail Abdillahi has extensive experience working within multi-stakeholder institutional environments, connecting higher education institutions, public organisations, international partners, development actors and private-sector stakeholders. His experience combines institutional coordination, digital transformation, capacity building, research cooperation and data-driven decision-support approaches within the Djibouti and Horn of Africa context.

Higher Education and Research Institutions

- **University of Djibouti:**

  Leadership responsibilities through the Laboratory of Analysis, Modelling and Optimization (LAMO), academic programme development and research capacity building initiatives.

- **International Academic Partners:**

  Coordination of collaborations with European and African universities, including joint research activities, doctoral supervision, scientific exchanges and knowledge transfer initiatives.

Government Institutions and Public Sector Stakeholders

- Collaboration with national institutions involved in education, higher education, statistics, research and public policy implementation.
- Experience supporting public-sector decision-making through analytical studies, modelling approaches, digital tools and evidence-based recommendations.
- Contribution to institutional strengthening initiatives through training, capacity development and technical support activities.

Development Partners and Research Funding Organisations

- Experience managing and coordinating externally supported research and capacity-building projects funded by international organisations.
- Collaboration with development-oriented stakeholders on innovation, research development, digital transformation and knowledge transfer.
- Experience preparing technical contributions, scientific outputs and project coordination activities.

Private Sector and Data-Driven Transformation Stakeholders

- Collaboration with private-sector organisations requiring data analytics, performance monitoring and digital improvement solutions.
- Application of Business Intelligence, KPI frameworks and analytical methods to support operational efficiency and management decision-making.
- Development of data governance approaches adapted to institutional and organisational needs.

Key Institutional Stakeholders and Partners

- **University of Djibouti (UD):** Academic leadership, research governance, curriculum development and institutional capacity building.
- **Ministry of National Education and Vocational Training (MENFOP):** Collaboration on STEM education, mathematics promotion, digital skills development and national education initiatives.
- **Ministry of Higher Education and Research (MENSUR):** Support to higher education development, research policy, innovation and institutional strengthening.

- **National Institute of Statistics of Djibouti (INSTAD):** Collaboration on statistical analysis, data management, modelling and evidence-based policy support through World Bank-funded activities.
- **Disaster Preparedness and Response Centre (DPCR):** Technical collaboration on data analysis, modelling and institutional capacity development for disaster risk management.
- **African Centre of Excellence in Logistics and Transport (ACE–CEALT):** Coordination of internationally funded research projects, technical assistance, capacity building and international scientific cooperation.
- **SGTD – Doraleh Container Terminal:** Consultancy on digital transformation, Business Intelligence, KPI frameworks, data governance and operational performance monitoring.
- **Salaam African Bank:** Collaboration on digital innovation, university-industry partnerships, internship programmes and capacity development initiatives.
- **National Agency for Information Systems (ANSIE):** Collaboration on digital transformation, information systems and national digital development initiatives.
- **United Nations Development Programme (UNDP):** Participation in technical discussions and collaboration on research, capacity building and sustainable development initiatives.

Regional Context Expertise

- Strong understanding of Djibouti's institutional ecosystem, development priorities and digital transformation challenges.
- Professional experience within the Horn of Africa region, including academic and scientific collaborations with African institutions.
- Ability to facilitate dialogue between academic, governmental, technical and private-sector stakeholders.
- Experience supporting capacity building and knowledge transfer in multicultural and international environments.

23 Key Assignment Relevance

Dr. Liban Ismail Abdillahi combines advanced expertise in digital transformation, data governance, Artificial Intelligence, Business Intelligence and Results-Based Management, supported by extensive experience in institutional capacity building, performance improvement and evidence-based decision-making.

He has demonstrated leadership in managing multidisciplinary teams, coordinating academic and institutional partnerships, supporting digital modernisation initiatives and delivering technical expertise to public institutions, universities and private-sector organisations within international cooperation frameworks.

Assignment Requirement	Relevant Expertise
Digital Transformation & Information Systems	Digital systems improvement, Business Intelligence dashboards, KPI frameworks and data-driven decision-support solutions.
Data Governance, AI & Analytics	Data governance, Artificial Intelligence, data science, predictive analytics and mathematical modelling for organisational performance.
RBM, Monitoring & Evaluation	Performance indicators, monitoring frameworks, RBM tools and evidence-based reporting systems supporting institutional decision-making.
Institutional Capacity Building	Institutional strengthening, training, curriculum development, knowledge transfer and organisational development initiatives.
Stakeholder Coordination & International Cooperation	Management of multidisciplinary teams and partnerships with public institutions, universities, private-sector actors and international partners.

Added Value

- Proven ability to combine digital transformation, data analytics and institutional development.
- Strong experience delivering technical assistance in multicultural and multidisciplinary environments.
- Capacity to translate analytical evidence into practical solutions for public institutions and development programmes.

24 Availability and Declaration

Declaration of Accuracy and Professional Availability

I hereby certify that the information provided in this Curriculum Vitae accurately reflects my academic qualifications, professional experience, technical competencies and institutional responsibilities.

I confirm my availability to contribute as a Senior Expert in technical assistance assignments related to digital transformation, data governance, artificial intelligence, results-based management (RBM), institutional strengthening, capacity development and evidence-based decision support.

I confirm my willingness and availability to participate in EU-funded technical assistance projects and contribute my expertise to institutional development initiatives in Djibouti, the Horn of Africa and international cooperation environments.

I am committed to providing high-quality technical expertise, supporting stakeholder coordination, knowledge transfer and sustainable capacity building outcomes.

Dr. Liban Ismail Abdillahi
Senior Expert in Digital Transformation, Data Science and Institutional Capacity Building
Associate Professor of Applied Mathematics – University of Djibouti
Director of LAMO – Laboratory of Analysis, Modelling and Optimization
Djibouti
Date: 30 July 2026
